### Project Description:

*This reconstruction project is in the City of Frankfort Indiana and will consist of the reconstruction of Maish Road. The proposed project shall improve Maish Road from Wabash Avenue (U.S. 421/S.R. 28) to Michigantown Road (approximately 1,251 meters or 4,104 feet). The purpose of the project is to improve pavement, curbs and sidewalks in poor condition, improve drainage capacities by constructing new storm sewers, improve pedestrian and unmotorized traffic safety by constructing new ADA compliant concrete sidewalks and improving traffic flow by replacing existing signage, adding a TWLTL and the appropriate lane markings, school crosswalks and stop bars. The current AADT of the existing roadway is approximately 6,800 vehicles per day according to the Indiana Department of Transportation traffic counts. Calculations based on census data indicates that the estimated average daily traffic flow would be improved to accommodate approximately 9,310 vehicles per day for 2029.*

*The existing asphalt road and curb and gutter will be removed. The design criteria for two-way left turn lane warrants were consulted for the addition of a two-way left turn lane (TWLTL). All five of the criteria were met and therefore a TWLTL was found to be advantageous and added to the project cross section. The cross section is two 3.30 m travel lanes with the 4.20 m TWLTL in the center with combined concrete curb and gutter and concrete sidewalks. Right turn auxiliary lanes will be added at the Frankfort Middle and High Schools. The vertical alignment is designed to follow existing topography as closely as possible while meeting the necessary stopping sight distances, intersection sight distances. A paving exception will occur at the at-grade Norfolk and Western Railroad crossing. Intersection sight distance criteria have been met for the project.*
